- The patient is available and willing to attend hospital for tests/appointment within 14 days
- The patient has been given the Fast track patient information leaflet

Hyperlinks to: [NICE GUIDANCE](#) [Patient info leaflet including easy read](#)

Guidance	This pathway is specifically for patients who have had a scan (CT, MRI, US) that shows metastatic malignancy, for which there is no obvious or apparent primary
	If the patient has <u>not</u> had any imaging but malignancy is suspected, consider the SNSS pathway or appropriate Site-Specific Fast track referral pathway
	If the patient has a known primary cancer, discuss with the primary cancer team before considering this to be a new malignancy of unknown origin
	Please complete the following tests to exclude an obvious primary, prior to referral:
	<ul style="list-style-type: none"> • No clinical indication of a primary site on history or examination • CXR (unless CT chest already done) – if abnormal consider Fast Track Lung • PSA in all male patients – if abnormal consider Fast Track Urology • Myeloma screen (serum EP and serum free light chains) if scan shows bone lesions • CA125 for female patients with peritoneal disease – if abnormal consider Fast Track Gynae
